

# SMART MANAGEMENT ADD-ON

Imagine using one centralized console to manage all of your Red Hat Enterprise Linux systems

## RED HAT RETURN

A recent study by analyst firm IDC found that businesses using the Smart Management Add-On with Red Hat Network (RHN) Satellite realized a more than 300% return on investment (ROI) with a payback period of less than five months.

With the Smart Management Add-On you can manage the complete lifecycle of mainframes, desktops, servers, and physical or virtual machines.

The Smart Management Add-On includes Red Hat Network Management and Provisioning modules that let you provision, patch, configure, and fully control your Red Hat Enterprise Linux development, test, and production systems. You can also purchase an optional Red Hat Network Monitoring module. By proactively automating routine tasks, such as patch management, you can concentrate on other, higher-value-added tasks.

## SMART MANAGEMENT OFFERS TECHNICAL FEATURES THAT DIRECTLY BENEFIT YOUR BUSINESS

The Smart Management Add-On allows organizations like yours to easily manage and update Red Hat Enterprise Linux systems using Red Hat Network or Red Hat Network Satellite.

Feature	Technical function	Business benefit
Lifecycle Management	<ul style="list-style-type: none"> <li>• Provision, update, and configure all Red Hat Enterprise Linux systems from one console</li> <li>• Get fine-grained package and configuration management capabilities</li> </ul>	Deliver quality systems when promised and within cost estimates using an identifiable, measurable, and repeatable process
Provisioning	<ul style="list-style-type: none"> <li>• Deploy entire application stacks, from Red Hat Enterprise Linux to independent software vendor (ISV) applications, to custom applications, drivers, firmware, and configuration files</li> <li>• Quickly create templates for provisioning using Kickstart</li> </ul>	Provision new Red Hat Enterprise Linux systems quickly and consistently
Patch Management	<ul style="list-style-type: none"> <li>• Manage thousands of systems as easily as one using the system groups feature</li> <li>• Schedule updates to occur during maintenance windows</li> <li>• Undo problematic changes with snapshots and rollbacks</li> <li>• Compare package profiles between systems to quickly spot differences</li> </ul>	Take an existing environment and replicate it, achieving a high degree of consistency throughout your IT environment
Monitoring (additional option)	<ul style="list-style-type: none"> <li>• Monitor both Red Hat Enterprise Linux and applications from Oracle, BEA, Apache, and other third-party vendors</li> <li>• Monitor utilization of CPU, memory, and storage</li> <li>• Receive email or pager notices when a probe reaches a pre-defined warning or critical threshold</li> </ul>	View reports and graphs of probe performance over time to determine what adjustments need to be made

Feature	Technical function	Business benefit
Reporting and Auditing	<ul style="list-style-type: none"> <li>Get detailed histories of events that take place on each system to meet compliance requirements</li> <li>Choose between prepackaged and custom reports</li> <li>Manage all Red Hat Enterprise Linux subscriptions</li> </ul>	See information easily on all your managed systems
Application programming interface (API)	Integrate with other management frameworks from IBM, BMC, and HP	Automate and integrate with other tools
Multiple Organizations	Logically subdivide your Red Hat Enterprise Linux environment by geography, system function, department, or other technical or organizational parameter	Allow for multi-tenancy for greater cost savings
Configuration Management	Group and manage configuration files for multiple systems from one console	Improve consistency, enable higher availability, and speed time to resolution of problems

### SMART MANAGEMENT

**SATELLITE** \$10,000

greater than 50

Software Distribution  
Account Management  
Channel Management

**SATELLITE STARTER PACK** \$4,999

less than 50

**RHN PROXY** \$2,500

**MANAGEMENT**

Manage groups of systems as easily as a single system

Assign permissions to administrators for managing different groups or roles

Schedule updates to occur during maintenance windows

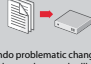

**PROVISIONING** \$192

Provision existing or bare metal systems using profiles or system cloning

Improve consistency by using RHN to manage and deploy configuration files

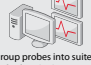

Undo problematic changes with snapshots and rollback

**MONITORING** \$96

Dozens of low-impact probes can be set for each system

Group probes into suites for fast deployment

Receive email or pager notices when a probe reaches warning or critical threshold

Note: Pricing listed is for 1 virtual guest. Also available for 4 and unlimited virtual guests.

Pricing Model MSRP US Dollar
